Study shows SARS-CoV-2 jumped between people and mink, providing strong evidence of zoonotic transmission

Risk of human-to-wildlife transmission of the COVID-19 virus

Mexico has agreed to host human trials of seven Covid-19 vaccines to strengthen relations with pharmaceutical companies in case limited production capacity leads to a battle for doses.

Mexico uses human trials as path to secure future Covid-19

...

The zoonotic origin of the SARS-CoV-2 pandemic is still unknown. Animal experiments have shown that non-human primates, cats, ferrets, hamsters, rabbits and bats can be infected by SARS-CoV-2. In addition, SARS-CoV-2 RNA has been detected in felids, mink and dogs in the field. Here, we describe an in-depth investigation of outbreaks on 16 mink farms and humans living or working on these farms ...

transmission from mothers to their infants.

Global Impact of Human Immunodeficiency Virus and AIDS ...

Malaria transmission cycle. Malaria spreads when a mosquito becomes infected with the disease after biting an infected person, and the infected mosquito then bites a noninfected person. The malaria parasites enter that person's bloodstream and travel to the liver. When the parasites mature, they leave the liver and infect red blood cells.
