I have a 1999 50 hp mercury bigfoot 4 stroke and i believe it is having fuel problems.while boating saturday the rpms suddenly dropped from 5100 to 3500 and remains this way.I checked all the spark plugs they look great,i replaced fuel filter.The boat will start if i give it throttle in N but as soon as i begin to return towards idle it will die.Normally this engine runs great,could this be a fuel pump issue.
