~~With 180-grain bullets, .303 handloads are within about 100 fps of the same bullet weight in the .308 and slightly ahead of 180-grain .300 Savage handloads. With an eye on bullet selection, let's revisit the long bullet chamber throat issue. The SAAMI drawing of the .303 British chamber shows a slightly tapered freebore section 0.209 inch long behind a leade that is 0.306 inch long.~~

~~If you must use a lighter bullet, the 100gn Speer 30-calibre Plinker bullet can be driven at over 2900fps ahead of 48gn of AR2208. All of these loads proved safe in my rifle, but I could never achieve very good accuracy with the 100gn Plinker. Gun guru Nick Harvey answers a reader's question about reloading for his .303 British~~

Backing off 10 percent from starting loads, combined with the .303 Savage case's greater capacity, resulted in low velocities, inadequate gas seals, and sometimes wild extreme spreads. But, they got me started. The loads given in the accompanying table are all well within safe limits based on observations in my rifle.
