36-2 The Muscular System.

Muscular System Functions

- Skeletal muscle pulls on the bones of the skeleton, creating movement.
- Even when not moving, skeletal muscle is partially contracted, maintaining tone and posture.
- Circular muscles called sphincters control openings

The muscular system is a set of tissues in the body with the ability to change shape.

Muscle cells connect

together and eventually to

elements of the skeletal

system. When the muscle

cells contract, force is

created as the muscles pull

against the skeleton.
