children, including infant mortality, asthma, neurodevelopmental disorders, and childhood cancers. By “prescribing” clean air for children, policymakers can protect them from the lifelong effects of air pollution exposure.

How air pollution is destroying our health

The scientific evidence is unequivocal: air pollution can harm health across the entire lifespan. It causes disease, disability and death, and impairs everyone's quality of life. It damages lungs, hearts, brains, skin and other organs and increases the risk of disease and disability, affecting virtually all systems in the human body.
