In order to have
the Arduino

access the LEDs,

you have to

build a small

circuit on a

solderless

breadboard. The

breadboard has

two parts: the

inner rails

(which run width-

wise) and the
outer rails
(which run
length-wise).

The rails are
electrically
connected along
their lines, so
you can connect
components
without actually
soldering them
together.

experimenting
with the
theremin in
chapter 5. The
code comments in
the book say
that it spans 6
octaves.

However, mine
does not seem to
span that much.

I am using
