Canon updates its highly popular and successful PowerShot SD series with the SD1300. With a lean build and limited user input, it's a great option for snap-shooters. The Canon PowerShot SD1300 IS updates the very popular SD1200 IS. Most of the differences between the two cameras are inconsequential – more cosmetic than substantive – with the exception of the disappearance of the SD1200 IS's optical viewfinder and the SD1300 IS's 33% more zoom and nifty new power button.

The first rule of lockdown: Find a safe place to hide. Ava is having a really bad day. Her parents are getting divorced. She just had a big argument with her two best friends. And she forgot to charge her phone... again. To top it all off, while she is hiding out in the bathroom over lunch, the alarm goes off for a lockdown drill. Ava knows the rules. She has to get herself into a classroom, turn the ringer off on her phone, lock the door, and cover the windows. But all of the rooms have already been locked from the inside and there is no one in the halls. Pretty soon she realizes there is an intruder in the building. This isn't a drill. From the author of From Me to You and House Arrest, comes this timely book that explores both the effect of school lockdown drills and the relatable struggles of modern middle grade friendship.

The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: Night Vision Study and Photogrammetry; Vehicle Event Data Recorders; Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction. The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

The Workshop on the Economics of Information Security (WEIS) is the leading forum for interdisciplinary scholarship on information security, combining expertise from the fields of economics, social science, business, law, policy and computer science. Prior workshops have explored the role of incentives between attackers and defenders, identified market failures dogging Internet security, and assessed investments in cyber-defense. Current contributions build on past efforts using empirical and analytic tools to not only understand threats, but also strengthen security through novel evaluations of available solutions. Economics of Information Security and Privacy III addresses the following questions: how should information risk be modeled given the constraints of rare incidence and high interdependence; how do individuals' and organizations' perceptions of privacy and security color their decision making; how can we move towards a more secure information infrastructure and code base while accounting for the incentives of stakeholders?

This book serves as a practical guide for the prevention and treatment of radiation dermatitis. Skin toxicity caused by radiation treatment is common among cancer patients and minimizing the frequency and severity of these reactions improves quality of life and prevents interruptions that can compromise local-regional control. Each chapter is devoted to a specific disease site, such as the head and neck, breast, gastrointestinal, genitourinary, gynecologic, and central nervous system. Pediatric malignancies and wound care for locally advanced cancers are also discussed. For each topic, the range and frequency of the observed skin reactions, factors influencing these reactions, the typical course of each reaction and its resolution, and the interventions used are presented. This book provides evidence where it exists for the specific interventions and an extensive illustration program depicts the various reactions and their response to treatment protocols. Skin Care in Radiation Oncology: A Practical Guide presents a framework for patient care in an era of advancing technology and systemic and targeted therapies and is a valuable resource for radiation oncologists, dermatologists, and residents.
