CHAPTER 6 (Weathering and Soil)

1. Weathering is a term which describes the general process by which rocks are broken down at the Earth ' s surface into such things as sediments, clays, soils

and substances that are dissolved in water.. 2. The process of weathering typically begins when the earth ' s crust is uplifted by tectonic forces.

5.2 Chemical Weathering – Physical Geology

Soil forms through accumulation and decay of organic matter and through the mechanical and
