Producers, Consumers, and Decomposers in the Forest Community.  
By Taylor Seigler. A: Producers: Photosynthesizing organisms.  
Producers are any kind of green plant. Green plants make their food by taking sunlight and using the energy to make sugar. The plant uses this sugar, also called glucose to make many things, such as wood, leaves, roots, and bark.

Producers, Consumers, and Decomposers in the forest community

# Access Free Consumers And Producers Little World Social Studies Paperback

A food chain always starts with a producer. This is an organism that makes its own food. Most food chains start with a green plant, because plants can make their food by photosynthesis. A living...

What is a food chain? - BBC Bitesize

Top 10 largest oil consumers. The United States consumes a little more oil than it produces. According to the US Energy Information Administration (EIA), the US consumed 19.96 million barrels of oil per day in 2019. It accounts for 20% of the world's consumption, even though the US has only 4.25% of the world's population.
