Learning English and Chinese is becoming increasingly important to the prospects of young people. This book compares English as a Foreign Language teaching in Taiwan with Chinese as a Foreign Language education in England in order to highlight how classroom activities are embedded within multiple settings, including ethnic or other social group cultures, family and community resources and school visions or goals. The book illustrates how in Taiwan different ethnic groups recognise, access and value English language learning to varying extents. Its findings illuminate why some ethnic groups are highly motivated to learn English and are able to gain privileged economic positions in the job market. In England, access to Chinese is marked by social class, and the book argues that this could augment an 'educational apartheid' that already exists in language teaching in secondary schools, thereby exacerbating existing inequality.

This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics.
