INTRODUCTION : #1 Financial Crisis And Transformation Of Publish By Ann M. Martin, Financial Crisis And Transformation Of Korean Business sea jin chang argues that the korean financial crisis of 1997 was due to the inertia of both the business groups known as chaebols and the korean government which prevented adaptation to changing external

Sea-Jin Chang argues that the Korean financial crisis of 1997 was due to the inertia of both the business groups known as chaebols and the Korean government which prevented adaptation to changing external environments. Once the Korean government stopped central economic planning and pursued economic liberalization in the 1980s, the transition created a void under which neither the government nor markets could monitor chaebols' investment activities. The intricate web of cross-shareholding, debt guarantees, and vertical integration resulted in extensive cross-subsidization and kept chaebols from shedding unprofitable businesses. The government's continued interventions in banks' lending practices created 'moral hazards' for both chaebols and banks. This treatment demonstrates how the structure of chaebols later inhibited other adaptations and for all practical purposes became nearly dysfunctional. The book argues that restructuring of chaebols should focus on improving corporate governance systems. After such restructuring, the author predicts, chaebols will re-emerge as stronger, more focused global players.

This book explores the strategies that chaebols--Korean business groups--have pursued by examining their structures and assessing their performance. It highlights the strengths of chaebols that enable their fast growth, as well as the weaknesses that waylaid them when the 1999 Asian crisis occurred. Sea-Jin Chang asserts that the Korean government's restructuring efforts have not been successful and demonstrates why measures that overhaul chaebols' financial structures and strengthen their systems are necessary. He predicts that they will emerge again as stronger, more focused global players.

Explores the strategies that chaebols - Korean business groups - have pursued, examines their structures, and assesses their performance. It highlights the strengths of chaebols that enabled their fast growth, as well as the weaknesses that waylaid them when the Asian crisis occurred.

The financial crisis shows that the banking industry requires a transformation, as its business model and practices are no longer sustainable. Even so, such transformation cannot be made without Clearing the Bull--moving beyond old and tired orthodoxies in order to properly diagnose the problem. Drawing on more than twenty years of experience in banking, author Jonathan Ledwidge exposed the industry's poor system of values, leaving it mired in conflict with its human environment. Specifically, this includes how poor leadership, virtually unmanageable organizations, dysfunctional suppliers, infuriated customers, alienated employees, and dissatisfied communities all arise from the inability of banks to understand that values are more important than valuations. As a result there is now a total disconnect between banks and their human environment. That disconnect cannot be fully addressed by conventional solutions involving more regulations, more governance, and more controls. Banks have a very human problem, and thus by definition what they require is a human transformation. Clearing the Bull provides both a clear diagnosis as well as a detailed and comprehensive roadmap for the banking industry's human transformation--and while doing so it remains totally engaging and accessible to bankers and non-bankers alike.

In the aftermath of the financial crisis, why has the reform process been incremental yet the conditions for more rapid and abrupt transformations appeared to be available? Is there anything specific about financial policy that prevents more radical reforms? Drawing from Comparative Politics and Historical Institutionalism in particular, as well as International Political Economy, this book answers these questions by examining the particular institutional frictions that characterise global financial governance and influence the activity of change agents and veto players involved in the process of global regulatory change. The chapters in this volume collectively demonstrate that the process of change in financial rule-making as well as in the institutions governing finance does not fit with the punctuated model of policy change. The book also shows, however, that incremental changes can lead to fundamental shifts in the basic principles that inform global financial governance.

This volume provides a comprehensive study of Turkey's financial transformation into one of the most dynamic, if not trouble-free, emerging capitalisms. While this financial evolution has underwritten Turkey's dramatic economic growth, it has done so without ameliorating the persistently exploitative and unequal social structures that characterize neoliberalism today. This edited volume, written by an interdisciplinary range of political economists, critically examines Turkey's financial transformation, contributing to debates on the nature of peripheral financialization. Eschewing economicist interpretations, The Political Economy of Financial Transformation in Turkey underscores both the quantitative significance of exponential growth in financial flows and investments, and the qualitative importance of the state's institutional restructuring around financial imperatives. The book presents today's reality as historically rooted. By understanding the choices made under the new Republic (from 1923 onwards), one can better locate the changes launched as a newly liberalizing society (since 1980). Likewise, the decisions made in response to Turkey's 2001 financial crisis spurred a tectonic break in state-market-society financial relations. The waves of change have reached far and wide: from corporate strategies of accumulation and growth to small- and medium-sized enterprises' strategies of financial survival; from how finance has penetrated the provisioning of housing to how households have become financialized. Put together, one grasps the complexity and historicity of the power of contemporary finance. One also sees that the changes made have not been class-neutral, but have entailed elevating the interests of major capital groups, particularly financial capital, above the interests of the poor and workers in Turkey. Nor are these changes constrained to its national borders, as what transpires domestically contributes to the making of a financialized world market. Through this 'Made in Turkey' approach the contributions in this volume thus challenge dominant understandings of financialization, which are derived from the advanced capitalisms, by sharing the specificity of emerging capitalisms such as Turkey.

From Crisis to Crisis examines the impact of the harsh conditions of the interwar economy on the British merchant banks. The financial crises of 1914 and 1931 are assessed using primary sources. The competitive threats, including the rise of New York as a rival financial centre, are considered. It challenges alleged special treatment and provides fresh perspectives on the interwar rationalisation of industry. During the late nineteenth century, Britain's merchant banks had become pre-eminent in a world of fixed exchange rates, free trade and the unfettered mobility of international capital. This world was increasingly challenged in the interwar period, being replaced by floating exchange rates, trade protectionism and restrictions on capital movements. This book fills a gap in the historiography of British banking by recovering the histories of long-forgotten merchant banks rather than focusing on the better-known firms. Using a wide range of archival resources, it traces the strategic transformation by some merchant banks from higher-risk, capital intensive activities to lower-risk, advisory services. Brian O'Sullivan has been jointly awarded the 2019 BAC Wadsworth Prize for From Crisis to Crisis: The Transformation of Merchant Banking 1914-1939. It was judged by the Business Archives Council (BAC) to have made an outstanding contribution to the study of British business history. Brian shared the prize with Professor Priya Satis of Stanford University in California.

*The COVID-19 global health pandemic, which started in late December 2019, forced unusual measures such as social distancing and strict lockdowns in many countries. It changed many of our certainties and practices, including the foundations of the market-led version of capitalism, by bringing social and health considerations back to the forefront of firms' considerations, investors' strategies and governments' priorities. Under the effects of this unprecedented crisis, all sectors of the finance and real economy have been seriously affected. Health uncertainties and their increasing consequences for human life and activities require stronger and faster actions to shape pathways towards sustainability and better resilience. The COVID-19 health crisis is a visible part of a greater iceberg: the World Health Organization has tracked, over recent years, a large number of epidemic events around the world, suggesting that many other similar diseases could appear and evolve in the future from epidemic to pandemic in a globalized world. Financial Transformations Beyond the COVID-19 Health Crisis was specifically designed to provide the readers with new results, recent findings and future outlook on the impacts of COVID-19 on financial markets, firm behaviors, and finance and investment strategies. It favors multidimensional perspectives and brings together conceptual, empirical and policy-oriented chapters, using quantitative and qualitative methods alike. This is a timely and comprehensive collection of theoretical, empirical and policy contributions from renowned scholars around the world, and provides the thoughts and insights required to rethink the financial sector in the event of new shocks of the same nature"--
