Review "Within minutes of death, adult female blowflies arrive to lay eggs on a cadaver". So reads one of the captions at the Wellcome Collection's magnificently macabre: Forensics: The Anatomy of Crime exhibition. Morbid titillation, however, isn't the intent. The point is that forensic scientists can pinpoint the time of death by measuring the gestation period of the blowflies' larvae.

In volume crime cases, like burglary, if there is a realistic chance of recovering forensic evidence and identifying an offender they consider DNA swabbing, fingerprinting, footprint analysis. Sometimes they get an answer from one test that means they don't have to do any more complicated tests on that item.

Forensics - The Anatomy of Crime

A good book by crime writer Val McDermod, which goes in depth to provide the science behind the crime, and the criminal investigators who dig out the facts (both fire and police forensics). The book discusses such things as entomology and the CSI effect versus actual investigations; within the financial and time constrictions that are in place (some due to lack of funding and/or resources).
