Geochemical Anomaly and Mineral Prospectivity Mapping in GIS Description. Geochemical Anomaly and Mineral Prospectivity Mapping in GIS documents and explains, in three parts, geochemical anomaly and mineral prospectivity mapping by using a geographic information system (GIS). Part I reviews and couples the concepts of (a) mapping geochemical anomalies and mineral prospectivity and (b) spatial data models, management and operations in a GIS.

number – size (N – S) fractal modeling were used for copper geochemical anomaly mapping in the western part (training area) of Kuhshah-e-Urmak area, Iran. Then, according to the generated anomaly model in the training area, mineral potential mapping (MPM) was performed for the entire study area based on a well-fitted regression model as a data-driven method.

Emmanuel John Muico Carranza. The book documents and explains, in three parts, geochemical anomaly and mineral prospectivity mapping by using a geographic information system (GIS). Part I reviews and couples the concepts of (a) mapping geochemical anomalies and mineral prospectivity and (b) spatial data models, management and operations in a GIS. Part II demonstrates GIS-aided and GIS-based techniques for analysis of robust thresholds in mapping of geochemical anomalies.

Geochemical Anomaly and Mineral Prospectivity Mapping in ...  
Mineral prospectivity modeling considering geological factors may provide qualitative support for the exploration and semiquantitative prediction of geophysical and geochemical anomaly amplitudes and patterns (Clark, 2014). These factors under consideration mainly involve the tectonic setting, magmatic intrusions, composition of host rocks, depth of emplacement and post-emplacement erosion level, post-emplacement faulting and tilting, depth of burial beneath younger covers, and metamorphism.

Because methods of geochemical anomaly mapping and mineral potential mapping are highly specialized yet diverse, the book explains only methods in which GIS plays an important role. The book avoids using language and functional organization of particular commercial GIS software, but explains, where necessary, GIS functionality and spatial data structures appropriate to problems in geochemical anomaly mapping and mineral potential mapping.
