This volume is a source book of protocols for studying, monitoring and managing harmful marine microalgae. Proliferation of microalgae in marine, brackish or fresh waters can cause massive fish kills, contaminate seafood with toxins and alter ecosystems in ways humans perceive as harmful. About 300 species of microalgae are reported to form mass occurrences, so-called 'blooms', and nearly one-fourth of these species are known to produce toxins. This manual covers the fields of harmful algal sampling, identification, culturing, toxin analysis, toxicology and management.

This book is devoted to sharing the knowledge and experience of expert radiation therapy (RT) for extranodal lymphomas. For that purpose, the authors provide clinical-pathological information, precise RT techniques, and treatment results, i.e., disease control and survival, of all extranodal lymphomas. Over the past 10 years, specific techniques have been updated, from 3-dimensional conformal RT to intensity modulated RT / volumetric-modulated arc therapy. Precise targeting such as image-guided RT and active breathing control are now capable of treating lymphoma lesions that shift with respiration or peristalsis. This book, serving as a guide, provides the necessary knowledge for radiation oncology, practice, and planning involving the RT techniques of treating extranodal lymphomas. In addition, it equips oncologists, hematologists, and medical oncologists to refer patients with extranodal lymphomas to radiation oncologists for appropriate treatment in a timely manner. Therefore this volume will greatly benefit all oncologists, including radiation and medical oncologists, as well as hematologists.

This classic textbook now enters its fourth edition, offering a distillation of decades of research and teaching experience in toxicology. Known all over the world after its translation into six languages, *Lu's Basic Toxicology: Fundamentals, Target Organs, and Risk Assessment* is a benchmark text that brings clarity and insight into a rapidly evolving subject. Noted for its concise yet broad coverage of the subject, this new edition includes new chapters on over-the-counter preparations, lactation and occupational toxicology. In addition, it covers: " The action of chemicals that cause cancer, mutations, congenital malformations and organ or system specific effects " Why chemical target specific organs and systems and how these effects are revealed by laboratory tests " The host and environmental factors that modify these effects " The effects of food additives, pesticides, metals, pollutants in air, water and soil, as well as toxicants encountered in workplaces " The procedures commonly used in assessing risk associated with these chemicals The breadth of this book makes it ideal for students requiring an introduction to toxicology, whether those specializing in toxicology or those from other biomedical disciplines who need a clear and concise overview of the field. The inclusion of separate subject and chemical indexes also makes it a useful shelf reference for more experienced researchers. In *Lu's Basic Toxicology*, Frank Lu and Sam Kacew have transcribed their vast experience to produce a book which will be an invaluable reference to student and practising toxicologists everywhere.

Environmental mycobacteria can be found in diverse environments around the world, some of which have the ability to infect animals, birds and humans and have evolved mechanisms by which they can invade and grow within host cells, the pathogenic environmental mycobacteria (PEM). Although the diseases caused by these organisms have been known for many years, it is only recently that the potential significance of PEM as a waterborne pathogen has been appreciated. This publication discusses current knowledge about the distribution of PEM in water and other parts of the environment, the routes of transmission that lead to human infection, the most significant disease symptoms that can follow infection, methods of analysis and detection, the control of PEM in drinking-water and the assessment and management of risks.
