This is a lab manual for a college-level human anatomy course. Mastery of anatomy requires a fair amount of memorization and recall skills. The activities in this manual encourage students to engage with new vocabulary in many ways, including grouping key terms, matching terms to structures, recalling definitions, and written exercises. Most of the activities in this manual utilize anatomical models, and several dissections of animal tissues and histological examinations are also included. Each unit includes both pre- and post-lab questions and six lab exercises designed for a classroom where students move from station to station. The vocabulary terms used in each unit are listed at the end of the manual and serve as a checklist for practicals.

This concise, inexpensive, black-and-white manual is appropriate for one- or two-semester anatomy and physiology laboratory courses. It offers a flexible alternative to the larger, more expensive laboratory manuals on the market. This streamlined manual shares the same innovative, activities-based approach as its more comprehensive, full-color counterpart, *Exploring Anatomy & Physiology in the Laboratory*, 3e.

The outstanding illustrations and a balanced combination of line art and photographs make this lab manual an invaluable tool for teaching the undergraduate student of one- or two-semester anatomy and physiology. Using the cat as the primary specimen, this manual contains 47 exercises that provide a comprehensive overview of the human body and present the core elements of the subject matter.

Designed for the one-semester anatomy and physiology course, "Hole's Essentials of Human Anatomy and Physiology" assumes no prior science knowledge and supports core topics with clinical applications, making difficult concepts relevant to students pursuing careers in the allied health field. The unparalleled teaching system is highly effective in providing students with a solid understanding of the important concepts in anatomy and physiology.
