Calculation~~

Load calculation: A systematic method of evaluation to estimate heat loss, sensible and latent heat gain; an account of the total heat flow into or out of a home (depending on the time of year). We need to do load calculations in order choose equipment that will make an occupant comfortable and safe, and to keep energy costs down.

## Residential Energy Calculations & Manual J Load Calculations

Cooling Load Calculation Example. To calculate the estimated HVAC load for a house with 2,500 square feet, 12 windows, and 3 exterior doors occupied by 4 people, simply plug it into this formula:  $2,500 \times 25 = 62,500$  base BTU.  $4 \text{ people} \times 400 = 1,600$ .  $12 \text{ windows} \times 1,000 = 12,000$ .  $3 \text{ exterior doors} \times 1,000 = 3,000$ .
