Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors. In this book Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors. Distinguishing "agents" (e.g., molecules, cells, animals, and species) from their interactions (e.g., chemical reactions, immune system responses, sexual reproduction, and evolution), Flake argues that it is the computational properties of interactions that account for much of what we think of as "beautiful" and "interesting." From this basic thesis, Flake explores what he considers to be today's four most interesting computational topics: fractals, chaos, complex systems, and adaptation. Each of the book's parts can be read independently, enabling even the casual reader to understand and work with the basic equations and programs. Yet the parts are bound together by the theme of the computer as a laboratory and a metaphor for understanding the universe. The inspired reader will experiment further with the ideas presented to create fractal landscapes, chaotic systems, artificial life forms, genetic algorithms, and artificial neural networks.

How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.

This collection of original articles brings together for the first time the research on graffiti from a wide range of geographical and chronological contexts and shows how they are interpreted in various fields. Examples range as widely as medieval European cliff carvings to tags on New York subway cars to messages left in library bathrooms. In total, the authors legitimize the study of graffiti as a multidisciplinary pursuit that can produce useful knowledge of individuals, cultures, and nations. The chapters-represent 20 authors from six countries;-offer perspectives of disciplines as diverse as archaeology, history, art history, museum studies, and sociology;-elicit common themes of authority and its subversion, the identity work of subcultures and countercultures, and presentation of privilege and status.

Mobile Crane Support Handbook is a comprehensive reference that is focused exclusively on the design and engineering of supports for mobile crane installations. Written by one of the leading lifting specialist engineers, this book addresses the full range of subjects needed for the engineering of mobile crane support in the construction job site.

Coastal marine systems are among the most ecologically and socio-economically vital on the planet. It is now widely acknowledged that coastal and marine environments are experiencing enhanced changes as a result of natural and anthropogenic induced causes. Physical impacts of climate change, such as sea-level rise and extreme inundation events, pose a considerable threat to coastal settlements and the coastal ecosystems that provision and support them. Increases in concentrations of greenhouse gases projected for the 21st century are expected to lead to increased mean global air and ocean temperatures. Anthropogenically induced global climate change has profound implications for marine ecosystems and the economic and social systems that depend upon them. The relationship between temperature and individual performance is reasonably well understood, and much climate-related research has focused on potential shifts in distribution and abundance driven directly by temperature. Climate Change and Coastal Ecosystems covers the pioneer of the coastal and marine resources sector review of potential impacts on shorelines, estuaries, coastal wetlands, coral reefs, and ocean margin ecosystems. It reviews recent advances in our understanding of the physical and chemical nature of climate change in coastal oceans. Also, it examines the likely ecological responses to climate change as well as the proximate effects of environmental change, including impacts on individuals, populations and communities are addressed. The broader ecological responses that will emerge from these proximal impacts; emergent responses include alterations in biologically and socio-economically important patterns and processes ranging from primary productivity to biogeography to evolution are considered. This book considers major knowledge gaps and research needs in order to: assess the risk climate change poses to coastal settlements, coastal ecosystems and the interplay between the two; develop appropriate adaptation strategies for coastal settlements and ecosystems; and ascertain how land-based activities and adaptation strategies will influence the adaptive capacity of coastal ecosystems. This book will appeal to students, practitioners, as well as a beneficial guide for researchers working on riverine, estuarine, and coastal marine systems.

Enabling power: European Union (Withdrawal) Act 2018, s. 8 (1). Issued: 13.12.2018. Sifted: -. Made: 06.12.2018. Laid: -. Coming into force: In accord. with reg. 1. Effect: 2000 c.8 amended.
