Mirrors and Reflections presents an intuitive and elementary introduction to finite reflection groups. Starting with basic principles, this book provides a comprehensive classification of the various types of finite reflection groups and describes their underlying geometric properties.

"Mirrors and Reflections" presents a systematic and elementary introduction to the properties of finite groups generated by reflections. The approach is based on fundamental geometric considerations in Coxeter complexes, and emphasizes the intuitive geometric aspects of the theory of reflection

The Geometry Of Finite Reflection Groups expository text contains an elementary treatment of finite groups generated by reflections.

There are many splendid books on this subject, particularly [H] provides an excellent introduction into the theory. The only reason why we decided to write another text is that some of the applications of the ...

Just approach it step-by-step. For each corner of the shape: 1.

Measure from the point to the mirror line (must hit the mirror line at a right angle) 2. Measure the same distance again on the other side and place a dot. 3.

~~Mirrors and Reflections: The
Geometry of Finite Reflection ...~~

This recurring theme of mirrors and kaleidoscopes makes finite reflection groups real and concrete. The focus is decidedly on the geometric intuition. Readers do not need to know much group theory, though some group-theoretic concepts and results are used every now and then.

In \mathbb{R}^n with this property are called convex. More generally, a curve is an image of the segment $[0;1]$ of the real line \mathbb{R} under a continuous map from $[0;1]$ to \mathbb{R}^n . In particular, a segment $[a;b]$ is a curve, the map being $t \mapsto a + t(b-a)$.

In geometry, the mirror image of an object or two-dimensional figure is the virtual image formed by reflection in a plane mirror; it is of the same size as the original object, yet different, unless the object or figure has reflection symmetry (also known as a P-symmetry). Two-dimensional mirror images can be seen in the
