Plant structure and function - Biology Plants are living organisms made up of cells. Plants need sunlight and water to live and grow healthy. Many plants, but not all plants, produce flowers, which make fruit and seeds in order for the plant to reproduce.

Plant structure and function. High School Biology ...

The cell wall is the protective, semi-permeable outer layer of a plant cell. A major function of the cell wall is to give the cell strength and structure, and to filter molecules that pass in and out of the cell. A cell is the smallest part of an organism that still contains that organism's elements. The word itself comes from the Latin cella, meaning "small room."

cell wall - Dictionary Definition - Vocabulary.com
