Prospects for novel anti-TB agents and regimens Until very recently, no new class of antibacterial agent suitable for the treatment of TB had emerged for 30 years. One reason is the reluctance of the pharmaceutical industry to invest in the development of drugs that are unlikely to generate enough revenue to cover the costs of development.

Bayesian Methods, MaxEnt 90, was held in Laramie, Wyoming from 30 July to 3 August 1990. This volume contains the scientific presentations given at that meeting. This series of workshops originated in Laramie in 1981, where the first three of what were to become annual workshops were held. The fourth meeting was held in Calgary, the fifth in Laramie, the sixth and seventh in Seattle, the eighth in Cambridge, England, and the ninth at Hanover, New Hampshire. It is most appropriate that the tenth workshop, occurring in the centennial year of Wyoming's statehood, was once again held in Laramie. The original purpose of these workshops was twofold. The first was to bring together workers from diverse fields of scientific research who individually had been using either some form of the maximum entropy method for treating ill-posed problems or the more general Bayesian analysis, but who, because

Read PDF Present Status And Future Prospects Of Vending Machines

of the narrow focus that intra-disciplinary work tends to impose upon most of us, might be unaware of progress being made by others using these same techniques in other areas. The second was to introduce to those who were somewhat aware of maximum entropy and Bayesian analysis and wanted to learn more, the foundations, the gestalt, and the power of these analyses. To further the first of these ends, presenters at these workshops have included workers from areas as varied as astronomy, economics, environmental.

The changing situation in Myanmar creates new opportunities for deepening India-Myanmar relations. Owing to its strategic position,

Read PDF Present Status And Future Prospects Of Vending Machines

Myanmar is connecting Asia's three big markets – ASEAN, China and India. Myanmar forms a land-bridge connecting South Asia with Southeast Asia. But, country's underdeveloped infrastructure, institutional and business environment seriously limit participation of Myanmar into the global economy. However, Myanmar has the potential to become another dynamic growth centre of Asia if it develops a stronger and improved connectivity with the neighbouring countries. Opening-up and strengthening the connectivity with neighbouring countries such as India would also speed-up its development process. We should see connectivity through Myanmar as crucial for India's Look East Policy and deepening economic integration with ASEAN, China and beyond. This article deals with physical connectivity links between India and Myanmar. Specifically, it presents current status of all major

Read PDF Present Status And Future Prospects Of Vending Machines

modes of transportation links between India and Myanmar, and discusses the challenges and prospects. Besides, it also presents Myanmar's selected connectivity projects with neighbouring China and Thailand. Finally, this study draws an action plan for implementation of connectivity projects in Myanmar.

Agroforestry has come of age during the past three decades. The age-old practice of growing trees and crops and sometimes animals in interacting combinations – that has been ignored in the single-commodity-oriented agricultural and forestry development paradigms – has been brought into the realm of modern land-use. Today agroforestry is well on its way to becoming a specialized science at a level similar to those of crop science and forestry science. To most land-use experts, however, agroforestry has a

Read PDF Present Status And Future Prospects Of Vending Machines

tropical connotation. They consider agroforestry as something that can and can only be identified with the tropics. That is a wrong perception. While it is true that the tropics, compared to the temperate regions, have a wider array of agroforestry systems and hold greater promise for potential agroforestry interventions, it is also true that agroforestry has several opportunities in the temperate regions too. Indeed, the role of agroforestry is now recognized in Europe as exemplified by this book, North America, and elsewhere in the temperate zone. Current interest in ecosystem management in industrialized countries strongly suggests that there is a need to embrace and apply agroforestry principles to help mitigate the environmental problems caused or exacerbated by commercial agricultural and forestry production enterprises.
