International law dictates that in any dispute, the parties must endeavor to resolve their dispute in a non-threatening manner, and the use of force is prohibited. The failure of a state to enter or engage in good faith negotiations to resolve any conflict is a de facto violation of this principle of international law.

Principles of International Economic Law provides a comprehensive overview of the central topics in international economic law, with an emphasis on the interplay between the different economic and political interests on both the international and domestic levels. Following recent tendencies, the book sets the classic topics of international economic law, like WTO law, investment protection, commercial law and monetary law in context with aspects of human rights, environmental protection and the legitimate claims of developing countries. The book draws a concise picture of the architecture of international economic law with all its complexities, without getting lost in fragmented details. Providing a perfect introductory text to the field of international economic law, the book thoroughly analyses legal developments within their wider political, economic, or social context. Topics covered range from codes of conduct for multinational enterprises, to the human rights implications of the exploitation of natural resources. The book demonstrates the economic foundations and economic implications of legal frameworks. It puts into profile the often complex relationship between, on the one hand, international standards on liberalization and economic rationality and, on the other, state sovereignty and national preferences. It describes the new forms of economic cooperation which have developed in recent decades, such as the growing number of transnational companies in the private sector, and forms of cooperation between states such as the G8 or G20. This fully updated second edition covers new aspects and developments including the growing importance of corporate social responsibility, mega-regional-

economy. Featuring discussion of the economic rationale and social impact of the various legal regimes, Professor David Collins explores the four main pillars in international economic law: international trade, international investment, monetary relations, and development.

"Organized thematically rather than alphabetically, the subject is split into four principal sections: the foundations and architecture of international economic law, its principles, its main regulatory areas, and the future challenges that it faces. Comprising over 250 entries..., traditional international economic law subject matter is supplemented by coverage of newly developing areas. Thus, the concepts and rules of trade, investment, finance and international tax law are found alongside entries discussing the relationship of international economic law with environmental protection, social standards, development, and human rights."--

The state-centred 'Westphalian model' of international law has failed to protect human rights and other international public goods effectively. Most international trade, financial and environmental agreements do not even refer to human rights, consumer welfare, democratic citizen participation and transnational rule of law for the benefit of citizens. This book argues that these 'multilevel governance failures' are largely due to inadequate regulation of the 'collective action problems' in the supply of international public goods, such as inadequate legal, judicial and democratic accountability of governments vis-a-vis citizens. Rather than treating citizens as mere objects of intergovernmental economic and environmental regulation and leaving multilevel governance of international public goods to discretionary 'foreign policy', human rights and constitutional democracy call for 'civilizing' and 'constitutionalizing' international economic and environmental cooperation by stronger legal and judicial protection of

citizens and their constitutional rights in international economic law. Moreover intergovernmental regulation of transnational cooperation among citizens must be justified by 'principles of justice' and 'multilevel constitutional restraints' protecting rights of citizens and their 'public reason'. The reality of 'constitutional pluralism' requires respecting legitimately diverse conceptions of human rights and democratic constitutionalism. The obvious failures in the governance of interrelated trading, financial and environmental systems must be restrained by cosmopolitan, constitutional conceptions of international law protecting the transnational rule of law and participatory democracy for the benefit of citizens.

As national competition laws proliferate and enforcement efforts increase, the international competition law system is increasingly beset with conflicts between States with competing interests. This book explores ways to reduce conflicts, contending that an international competition law system is evolving.

Fifty years after the adoption of the Declaration on Permanent Sovereignty over Natural Resources by the General Assembly of the United Nations in December 1962, this volume assesses the evolution of the principle of permanent sovereignty over natural resources into a principle of customary international law as well as related developments. International environmental and human rights law leave unresolved questions regarding the limitations of this principle, e.g. extraterritorial and international influences such as the applicable criminal and tort law, as well as the extraterritorial and international promotion of good governance, including transparency obligations.
