Ratio and Proportion Problems and Solutions

A proportion is simply a statement that two ratios are equal. It can be written in two ways: as two equal fractions $a/b = c/d$; or using a colon, $a:b = c:d$. The following proportion is read as "twenty is to twenty-five as..."

and Proportion" with explanation ...

Ratio and Proportion - Aptitude Questions and Answers

Let us write the proportion with the help of the 10/20 ratio from above: $42 = 10 \ 20$. Now we solve it using a special method: Multiply across the known corners, then divide by the third number. And we get this: $? = (42 \times 10) / 20 = 420 / 20 = 21$. So you should draw the head 21 long.

Proportions - MATH

When two ratios are equal, they make a proportion, i.e. if $a/b = c/d$, then a, b, c and d are in proportion. This is represented as $a:b :: c:d$. When a, b, c and d are in proportion, then a and d are called the Extremes and b and c are called the Means,

Read Book Proportion Questions And Answers

also Product of the Means = Product of the Extremes i.e. $bc = ad$.

Quants - Ratio and Proportion Questions with Explanations

Introduction to Proportion. A lot of questions on ratio are solved by using proportion. Definition & Notation. ... Answer: This question has 3 parts. In the first part, there is 20% of bleach in 20 L of solution ? 4 L of bleach in 16 L of water = 20 L of solution. Let's note the details in a table for better clarity and understanding.
