Using everyday, easy-to-grasp examples to reinforce basic concepts, this highly regarded handbook remains the standard introduction to meteorology and the atmosphere -- components, problems, and applications. Includes the most up-to-date coverage of topics such as: ozone depletion; the ultraviolet index; temperature; dew point temperature and orographic effects; wildfires and weather ...

The Atmosphere: An Introduction to Meteorology - Frederick ...

An atmosphere is a layer or a set of layers of gases surrounding a planet or other material body, that is held in place by the gravity of that body. An atmosphere is more likely to be retained if the gravity it is subject to is high and the temperature of the atmosphere is low. The atmosphere of Earth is composed of nitrogen, oxygen, argon, carbon dioxide and other gases in trace amounts. Oxygen is used by most organisms for respiration; nitrogen is fixed by bacteria and lightning to produce amm
